

The OBA is pleased to offer the industry's leading counterfeit detection device, the **Fraud Fighter™ UV-16**, that now includes new patent pending dual photovoltaic sensors ("SureTest-DLS") which automatically inform the user when the UV fluorescent tubes are no longer effective and need replacement. UV emissions from fluorescent tubes will decrease over time. The bulbs, though still lit, are no longer able to properly detect the presence of the hidden UV features in the item being verified. This can leave users and customers exposed to fraud or false accusations of fraud.

For the **first time**, users of Ultraviolet (UV) counterfeit detectors will actually know when the UV fluorescent bulbs in the detector are no longer functioning efficiently and potentially providing false readings of "Fake" or "Real."

Normally \$98, a special discounted price is available to OBA members of only \$78.

**Non-members call 405/424-5252 for pricing.
